Professional Summary

Software Engineer with experience building production-grade frontend systems, integrating backend APIs, and working closely with cloud infrastructure and CI/CD pipelines. Strong focus on scalable UI architecture, multi-tenant SaaS workflows, and infrastructure-aware frontend development. Proven ability to deep-dive unfamiliar codebases, reverse-engineer APIs, and deliver end-to-end features with minimal supervision across frontend, back-end integration, and deployment workflows.

Core Skills

Cloud & DevOps

- AWS: EC2, ECS, Fargate, ECR, S3, API Gateway, WAF, Cognito, DynamoDB
- Terraform for infrastructure provisioning and environment management
- GitHub Actions for CI/CD, automated testing, builds, and deployments
- Docker and containerized application deployments
- OIDC-based GitHub-to-AWS authentication
- Environment-based deployment workflows and cloud configuration

Backend & Systems

- Python, FastAPI, REST APIs
- PostgreSQL, DynamoDB
- Authentication, authorization, and MFA
- API integration and service-to-service workflows

Frontend

- React, Next.js, TypeScript, JavaScript
- Tailwind CSS, component-driven architecture
- React Flow, Two.js, Recharts

Engineering Practices

- Production debugging and troubleshooting
- Infrastructure-aware application development
- Codebase analysis and refactoring
- CI/CD and deployment workflow development
- Documentation-driven development

Engineering Practices

- Codebase deep-dives and refactoring
- Figma-to-production implementation
- Debugging production issues and deployment troubleshooting
- Reading and extending CI/CD and infrastructure code
- Documentation-driven development

Professional Experience

Software Engineer
eigenstudio November 2025 – Present

- Contributed to **Manan Wellness** (mananwellness.com), a production healthcare and mental wellness platform, working across the patient-facing mobile app (React Native / Expo), the web application (Next.js), and backend API integration.
- Built and maintained Next.js-based frontend modules for multi-tenant SaaS workflows, including incident management and user-facing dashboards.
- Implemented authentication flows – including OTP, Google Sign-In, and Cognito-based MFA – aligned precisely with Figma designs, ensuring UX consistency and security requirements.

- Integrated REST APIs for appointment booking, EHR, prescriptions, and payments by reverse-engineering backend services from source code, schemas, and Postman collections.
- Designed reusable UI components and integrated complex data visualizations using Two.js and Recharts for domain-specific analytics and diagrams.
- Debugged and resolved runtime frontend issues caused by state mismanagement and improper component contracts.
- Studied and extended GitHub Actions CI/CD pipelines, including Docker image builds and Terraform-based AWS deployments (ECS/Fargate/ALB) authenticated via GitHub-to-AWS OIDC, eliminating static credentials.
- Supported deployment troubleshooting across AWS and Cloudflare (DNS/SSL), including adapting the hosting architecture when an AWS account-level restriction blocked a planned CloudFront setup.
- Collaborated closely with backend and DevOps teams to align frontend requirements with infrastructure constraints.

Junior Software Developer
Avkalan Labs, Raipur April 2025 – November 2025

- Developed and maintained frontend applications using Next.js, React, React Native, and Electron.js for computational engineering products.
- Improved performance, usability, and responsiveness of complex engineering-focused applications.
- Collaborated with cross-functional teams to deliver scalable and user-focused features.

Frontend Developer Intern
Avkalan Labs, Roorkee November 2023 – April 2025

- Optimized Electron.js-based 3D rendering software, achieving approximately 60% performance improvement.
- Designed and implemented user-friendly interfaces for technically complex software.
- Worked with senior engineers to debug complex issues and deliver production milestones.

Key Projects

Manan Wellness – Production Healthcare Platform *eigenstudio*
mananwellness.com — app.mananwellness.com

- Healthcare and mental wellness platform connecting patients with doctors and pharmacies, supporting appointment booking, EHR, prescriptions, payments, notifications, and online consultations.
- Worked across the React Native/Expo mobile app and Next.js web app, integrating FastAPI backend services for appointments, authentication, and payments (Razorpay).
- Implemented OTP, Google, and Cognito-based MFA authentication flows, including guardian/minor account verification.
- Gained hands-on exposure to the platform's cloud infrastructure: AWS (EC2, ECS, ECR, ALB, S3, IAM), Terraform-provisioned environments, Dockerized deployments, GitHub Actions CI/CD with OIDC authentication, and Cloudflare DNS/SSL.

Multi-Tenant SaaS Frontend Platform

- Designed scalable frontend architecture supporting tenant isolation.
- Integrated Cognito-based authentication and MFA flows.
- Implemented incident lifecycle screens including listing, creation, and filtering.

CI/CD and Infrastructure Automation

- Implemented GitHub Actions workflows for automated testing and deployment.
- Used Terraform to provision AWS infrastructure, including VPCs, ECS services, API Gateway, WAF, and DynamoDB.
- Applied OIDC-based authentication between GitHub and AWS.

Interactive Flow and Visualization System

- Built node-based UIs using React Flow.
- Customized node rendering, animations, grouping, and layouts.
- Implemented Attio-inspired UI interactions and motion behavior.

Education

Bachelor of Technology in Electronics and Telecommunication Engineering
Government Engineering College, Raipur 2021 – 2025

Leadership

Chief Technical Executive
Code For Community, Government Engineering College Raipur April 2022 – June 2025

- Led design and development of the community website with a focus on usability and branding.
- Coordinated with developers and designers to execute technical initiatives and events.
- Organized workshops, coding challenges, and technical sessions.
